**De-coding the noncoding regulatory pathways of vascular inflammation**

Inflammation plays a critical role in driving the pathology of vascular diseases such as atherosclerosis. Our lab investigates the contributions of non-coding RNAs, including microRNAs and long non-coding RNAs to the regulation of vascular inflammatory signaling pathways. We are also deciphering how the response to inflammatory signaling pathways is encoded in the genome and determining the influence of genetic variation on these responses.

**Thursday October 11th, 2018**
11:00 AM-12:00 PM
MR5 3005
