Do you See What I See? Watching Cells During Angiogenesis and Lymphangiogenesis

This presentation will highlight the impact of biomimetic model development for making new discoveries about the cellular dynamics involved in microvascular remodeling. Novel observations made possible by time-lapse imaging of intact cultured tissues motivate paradigm creating questions related to lymphatic-blood vessel plasticity, pericyte recruitment, and the vasculogenic potential for stem cell populations.

**Thursday February 14th, 2019
11:00 AM-12:00 PM
MR5 3005**

Hosted by: Brant Isakson, PhD
