The Robert M. Berne Cardiovascular Research Center Presents

Kathryn Moore, PhD

Affiliation: Jean and David Blechman Professor of Cardiology, NYU School of Medicine, New York

Intersection of cardiovascular disease and breast cancer

Emerging evidence suggests that chronic or acute host stressors, such as obesity or surgery, can alter cancer pathogenesis. Many cancer patients, particularly those with breast cancer, are at increased risk for cardiovascular events due to treatment toxicity and resulting changes in lifestyle behaviors. Dr. Moore will discuss how cardiovascular events alter systemic homeostasis and mediate cross-disease communication in breast cancer.
