Non-coding RNA-mediated endothelial stress response in diabetes

Non-coding RNA (ncRNA) including microRNA and long non-coding RNAs are essential regulators in biology and offer new opportunities for better understanding and treatment of metabolic and vascular diseases. Two topics will be covered in this talk with emphases on ncRNA and vascular endothelium: 1) Suppression of endothelial Argonaute 1 protects against obesity and diabetes; 2) lncRNA-chromatin interactome contributes to diabetes-associated endothelial dysfunction

Thursday September 17th, 2020
11:00 AM-12:00 PM
Via Zoom
